

Java

```
class Solution {  
    public int maxBuilding(int n, int[][] restrictions) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} n  
 * @param {number[][]} restrictions  
 * @return {number}  
 */  
var maxBuilding = function(n, restrictions) {  
  
};
```

TypeScript

```
function maxBuilding(n: number, restrictions: number[][]): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int maxBuilding(int n, vector<vector<int>>& restrictions) {

    }
};
```

C#

```
public class Solution {
    public int MaxBuilding(int n, int[][] restrictions) {

    }
}
```

Kotlin

```
class Solution {
    fun maxBuilding(n: Int, restrictions: Array<IntArray>): Int {

    }
}
```

Go

```
func maxBuilding(n int, restrictions [][]int) int {

}
```
